

Secur-a-file™ provides a keyless security system for your confidential documents. It allows you to store sensitive paperwork securely in an unlocked filing cabinet, together with non-sensitive files.

The Secur-a-file™ represents the newest concept in document protection. Our revolutionary plastic security seal, unlike a lock, leaves a visual record each time the Secur-a-file™ is opened—any unauthorised tampering will result in a broken seal. If a Secur-a-file™ is found in that condition or with a wrong numbered seal, the file owner will know immediately that security has been breached.

security can be breached and re-locked leaving no sign of entry. The real disadvantage of lock security is its fallibility. A lock's duplicated, lost or stolen and locks can be picked with a locksmith's tool. The real disadvantage of lock security is its fallibility. A lock's security can be breached and re-locked leaving no sign of entry.

If you lock your personnel files, budget and boardroom papers, wages records and the like in a filing cabinet and believe they are secure, consider that the cabinet is only as safe as its lock. Keys can be duplicated, lost or stolen and locks can be picked with a locksmith's tool. The real disadvantage of lock security is its fallibility. A lock's security can be breached and re-locked leaving no sign of entry.

So you think that your secrets are secure in a locked filing cabinet?
