

Pullock Seal

Sewlock® zip security housing

Pullock seal—shown twice its size

The Pullock seal is a solid, 104 mm long plastic seal with 24 locking positions in 3 mm increments to assure a snug and secure closure. A unique 6-digit number is stamped on the flat panel of each seal to prevent/detect tampering. The Pullock seal is designed to deny access to the contents of the bag by restricting the movement of a bag's zip slider. Feed the tail of the seal through the eye of the zip slider, loop back through the round hole in the seal's number panel and pull tight—the bag's contents are secure.

Cut the seal to open the bag. Each Pullock seal is good for only one closure.

BAGMASTERS™

Bagmasters™ is a sales division of
Sewlex Manufacturing P/L ACN 007 113 055
3 University Place, Clayton North, Victoria 3168
Telephone (03) 9561 5500 Fax (03) 9561 2612

The Sewlock® zip security housing when used in conjunction with a 'one time use' coded seal, such as the Pullock, provides protection against unauthorised entry. The housing can also be used with a padlock, however, detection of illegal entry becomes more difficult with this type of closing system. Sewlock® is exclusive to Bagmasters™.
