

# Are you tired of replacing the paper suspension files in your filing cabinets?

There is now an answer to this annoying problem — the Bagmasters™ **'Tough One'**® heavy-duty suspension file

Every filing cabinet contains two or more paper suspension files which cannot carry the load and have to be continually replaced when the paper tears away from the light, folded metal glides. It is these files in most cabinets that Bagmasters **'Tough One'** heavy-duty suspension files have been designed to replace.

Velcro pads for securely closing the file when required

Identification tabs with clear-PVC protective covers are permanently sewn into the file's frame

## DETAILS

- The Bagmasters **'Tough One'** is produced from heavy-duty reinforced PVC sewn onto two specially formed 4 mm diameter galvanised steel rods which carry the load that buckles the others.
- The files can be closed at the top with the permanently fitted velcro pads—protecting the file's content when outside of the cabinet, and preventing documents from slipping between files.
- Large, clear-PVC-protected identification tabs are permanently sewn to the file's frame.
- The files come in a range of eight popular colours which allow for easy identification of the contents and/or the filing cabinet they came from.
- The Bagmasters **'Tough One'** is supplied in packets of ten files.

The reinforced PVC is sewn onto heavy-duty 4 mm diameter galvanised steel rods

The metal rods are specially formed to prevent rolling and back-and-forth movement in the file pocket

Reinforced PVC: Polyester scrim sandwiched between two layers of heavy-duty PVC

A range of 8 popular colours: red, orange, yellow, green, blue, mulberry, white and black

Standard or gusset bottom
